

Procurement sampai buku besar

Cara memakai sistem, langkah demi langkah, dari menambah supplier sampai mencocokkan rekening koran. Setiap langkah di dokumen ini sudah dijalankan dalam simulasi terhadap database yang sama dengan sistem live.

Versi 23 September 2026 · dibuat otomatis dari tabel pengetahuan John Lau (ops_asst.processes). Gambar diambil dari mode demo, jadi angkanya contoh.

- | | |
|--|--|
| 1. Menambah supplier dan barang | 6. Membayar baris PR dan mencatatnya ke buku besar |
| 2. Membuat permintaan pembelian (PR) | 7. Melengkapi transaksi di buku besar |
| 3. Persetujuan barang (papan rapat dan Google Chat) | 8. Verifikasi bukti yang masuk (kotak verifikasi) |
| 4. Membuat, mengonfirmasi dan mengirim purchase order (PO) | 9. Mencocokkan rekening koran dengan buku besar |
| 5. Mencatat barang datang (penerimaan) | |

Sebelum mulai

Siapa mengerjakan apa. Staf procurement membuat PR, PO dan mencatat barang datang. Pimpinan (pemegang `approve_goods`) menyetujui barang dan mengonfirmasi PO. Keuangan (pemegang `post_ledger`) mencatat pembayaran ke buku besar, memverifikasi bukti, dan mencocokkan rekening koran. Tombol yang bukan bagian Anda tetap terlihat, tapi sistem akan menolak dengan alasan yang jelas.

Satuan kerjanya adalah baris. Satu PR bisa berisi banyak baris, dan tiap baris disetujui, dibayar dan diterima sendiri-sendiri. Status baris dihitung sistem, tidak pernah diketik.

Tanya John Lau kapan saja. Tombol `John Lau` ada di pojok kanan bawah setiap halaman. Tanyakan "bagaimana cara membuat PO?" atau "saya sudah submit PR, terus apa?". Panduannya tetap terbuka saat Anda pindah halaman, dan langkah yang sesuai dengan halaman yang sedang dibuka ditandai `you are here` . Percakapan tersimpan, jadi tidak hilang walaupun halaman di-refresh.

po-26-06-30_01			

John Laudemo

bagaimana cara membuat PO?

Creating a purchase order

1

Make sure the line is approved first. A PO is built from a request line that already has goods approval. open ↗

Approving the goods and approving the money are two different things, and the first has to exist before we order from a vendor.

2

`@ you are here` Open Purchase Orders, press Add new PO, choose the vendor. open ↗

3

Fill the lines: item, quantity, unit price. The line total is quantity x price, except a service line, where the amount is typed directly.

A service line has no quantity, so recomputing its amount from quantity x price gives zero.

4

If there is a deposit, put it in the deposit field. If not, leave it empty.

5

Press Issue to send it, or tick draft if it is not going out yet.

Before it is issued we owe nothing; after it, the deposit is already an obligation. A draft is the safe place to stop.

6

An issued PO is printed from its own page, not from a screenshot.

What prints is the document, with no menu and no sidebar.

guide.create_po

open the screen

Ask, or ask for something to be drafted...Send

1

Menambah supplier dan barang

Layar: `/master-data/suppliers` · Butuh: `procurement.create`

Supplier dan barang adalah daftar yang dipakai semua dokumen. Nama yang diketik selalu diterima supaya pembelian tidak terjadi di luar sistem; kurasi (merapikan dan menggabungkan duplikat) dilakukan belakangan.

1. Buka Master data → Suppliers, tekan tombol tambah, ketik nama supplier.

Kenapa: Nama apa pun diterima dan langsung bisa dipakai. Supplier baru belum dikurasi: muncul di daftar, belum muncul di dropdown pilihan sampai dikurasi.

– → belum dikurasi

John Lau

2. Buka Master data → Items untuk menambah barang: nama, kategori, dan satuan dasar.

Kenapa: Kategori harus dipilih dari daftar yang ada; kategori yang tidak dikenal ditolak (no_such_category). Kode barang dibuat otomatis (I-00001).

3. Kalau satuannya belum ada, tambahkan di Master data → Units, beserta konversinya.

Kenapa: Satuan dan konversi harus benar karena jumlah di PR, PO dan stok dihitung dari situ.

Berikutnya: **Membuat permintaan pembelian (PR)**

Membuat permintaan pembelian (PR)

Layar: `/procurement/pr/new` · Butuh: `procurement.create`

PR adalah permintaan barang atau jasa, satu dokumen berisi beberapa baris. Satuan kerjanya adalah baris: tiap baris disetujui, dibayar dan diterima sendiri-sendiri.

1. Buka Procurement → Requests, tekan **New request**.

mm/dd/yyyy

Rp 0

This request

Project

no project

A request can hold items for several jobs and several suppliers. What each item is for is written on the item.

Total requested

0 of 1 line(s) usable

Rp 0

0 line(s) will be saved. A line needs a description and a quantity above zero.

Submit for approval

Save as draft

A draft is in nobody's queue. Submitting is what puts these lines in front of the CEO.

John Lau

3. Tekan **Submit for approval** . Kalau belum siap, simpan sebagai draft dulu.

Kenapa: PR tanpa baris ditolak (lines_required). PR yang sudah disubmit tidak bisa disubmit lagi (already_submitted).

PR: DRAFT → PR: SUBMITTED · baris: WAITING FOR APPROVAL

4. Lampirkan bukti harga di tiap baris (penawaran, link toko, atau chat vendor) dari laci baris.

Kenapa: Baris tanpa bukti harga tidak bisa dikirim untuk disetujui dan tidak bisa disetujui (support_required).

Tanya-jawab

Apa bedanya status PR dan status baris?

Dokumen PR hanya DRAFT atau SUBMITTED. Yang bergerak adalah barisnya: WAITING FOR APPROVAL → APPROVED → PAID → COMPLETED. Status baris dihitung dari persetujuan dan pembayaran, tidak diketik.

Berikutnya: **Persetujuan barang (papan rapat dan Google Chat)**

3

Persetujuan barang (papan rapat dan Google Chat)

Layar: `/procurement/meeting` · Butuh: `wewenang approve_goods`

Pimpinan memutuskan baris mana yang boleh dibeli dan berapa nilainya. Persetujuan barang berbeda dari persetujuan uang, dan harus ada sebelum memesan ke vendor. Setiap angka yang disetujui harus punya bukti harga.

1. Buka Procurement → Meeting board. Baris yang menunggu keputusan ada di sini, dengan total yang diminta.

baris: WAITING FOR APPROVAL → —

PROCUREMENT

Meeting board

What is waiting to be decided, what has already been approved and not paid, and whether BCA 271 can cover it. Read in the room; the working detail lives on the requests board.

[Requests board](#)

APPROVED, NOT PAID YET	WAITING FOR A DECISION	BCA 271 BALANCE	TRANSFER INTO BCA 271
Rp 48,910,000 a claim on the account, not a reservation	Rp 7,912,000 not owed until somebody says yes	Rp 35,139,000 the account that pays suppliers	Rp 13,771,000 what is approved cannot be paid without it

Approve everything still waiting and **Rp 21,683,000** has to be moved into the paying account, not **Rp 13,771,000** — better seen now than by whoever tries to make the payments.

Rp 13,771,000 of what is already approved has no money behind it. Nothing here is reserved: whatever is transferred in is spent by whichever payment is made first, so an approval from last week can lose its funding to one made today and has to be asked for again.

Money moved before anyone approved it on 1 item(s), Rp 95,000 in total. They are in the first list, still waiting for a yes — paying something is not deciding it.

Waiting for a decision
5 item(s) · Rp 7,912,000 asked for. Nothing moves until these are decided.

[LIVE](#) [+ Add an item](#)

ITEM	INSTRUCTIONS	QTY	ASKED FOR	PICK

[John Lau](#)

2. Kalau pimpinan tidak di ruangan: centang barisnya lalu tekan

Send N to the approver on Chat. Kartu persetujuan dikirim ke Google Chat pemegang `approve_goods`.

Kenapa: Yang dikirim harus punya bukti harga, karena pimpinan tidak bisa memeriksa angka tanpa bukti dari HP. Kalau tidak ada yang memegang `approve_goods`, pengiriman ditolak (`no_approver`).

— → menunggu jawaban

3. Pimpinan menjawab dari kartu di Google Chat: setuju atau tidak.

Kenapa: Yang tercatat adalah akun pimpinan yang menjawab, bukan laptop rapat.

baris: WAITING FOR APPROVAL → baris: APPROVED

4. Kalau diputuskan di rapat: pemegang `approve_goods` mencentang baris, boleh mengurangi jumlah atau nominalnya, menambah instruksi, lalu tekan

Approve this.

Kenapa: Staf procurement tidak bisa menyetujui (authority_required). Nominal yang disetujui boleh lebih kecil dari yang diminta; yang diminta tetap tercatat.

baris: WAITING FOR APPROVAL → baris: APPROVED

Tanya-jawab

Siapa yang bisa menyetujui?

Hanya orang yang memegang wewenang approve_goods. Staf procurement tidak bisa menyetujui barisnya sendiri. Kartu Chat dikirim ke pemegang wewenang itu, bukan ke nama yang ditulis tangan.

Kenapa kirim ke Chat ditolak support_required?

Baris yang dikirim belum punya bukti harga. Lampirkan penawaran, link toko, atau tangkapan chat vendor di laci baris PR, lalu kirim lagi.

Berikutnya: **Membuat, mengonfirmasi dan mengirim purchase order (PO)**

4

Membuat, mengonfirmasi dan mengirim purchase order (PO)

Layar: `/procurement/po` · Butuh: `procurement.create`

PO adalah janji atas nama perusahaan kepada vendor. Dibuat sebagai draft, dikonfirmasi pimpinan, lalu di-issue. Sebelum di-issue tidak ada yang kita hutangi; sesudahnya uang muka (DP) sudah menjadi kewajiban.

1. Buka Procurement → Purchase Orders (atau Tracker), tekan **Add new PO**, pilih vendor.

Kenapa: Pastikan baris PR-nya sudah APPROVED dulu.

Truk datang malam. Foto ada, tanda terima menyusul besok pagi.

A delivery is normally recorded from the order itself, on [the purchase tracker](#). This page exists for the ones that could not wait for office hours.

John Lau

Tanya-jawab

Apakah stok gudang bertambah otomatis saat barang diterima?

Belum. Penerimaan di procurement belum tersambung ke stok inventory; stok masuk dicatat terpisah di modul inventory.

Berikutnya: **Membayar baris PR dan mencatatnya ke buku besar**

6

Membayar baris PR dan mencatatnya ke buku besar

Layar: `/procurement/pr` · Butuh: `wewenang post_ledger`

Membayar dan menulis baris buku besar adalah satu tindakan: uang keluar dari rekening, tercatat sebagai transaksi, dan langsung dialokasikan ke baris PR yang dibayar. Hanya keuangan (pemegang `post_ledger`) yang bisa, dan selalu dengan bukti transfer.

1. Buka Procurement → Requests, klik baris yang sudah **APPROVED** untuk membuka lacinya.

Kenapa: Yang dibayar adalah baris yang sudah disetujui.

baris: APPROVED → —

The screenshot shows the OPS TALALIVING interface. On the left is a sidebar with navigation options: Dashboard, HR, Procurement (selected), Meeting board, Payment rounds, Purchase Tracker, Purchase Order, Receiving Report, Accounting, Master Data, John Lau, Demo, and Settings. The main area displays the 'Requests' page with a table of open items. The table has columns for ITEM, VENDOR, and amount. The items listed are BUBBLE WRAP 125CM, KARDUS DOUBLE WALL 60X40X40, STRETCH FILM 500MM, and KAYU JATI SORTIMEN A. The KAYU JATI SORTIMEN A item is highlighted, and a modal is open for recording the payment.

Nothing attached yet.

Document type: Payment Proof

Photograph Choose a file Paste a link

Attached here, to this item — the system already knows which line, which vendor and which amount, so it only asks what kind of document this is.

No longer needed

2. Di bagian pembayaran, pilih rekening sumber, jenis transaksi (misalnya **SUPPLIERS**), nominal, dan unggah bukti transfer.

Kenapa: Tanpa bukti transfer ditolak (`evidence_required`). Staf procurement tidak bisa mencatat pembayaran (`authority_required`) — hanya pemegang `post_ledger`.

3. Tekan **Post Rp... to the ledger**.

Kenapa: Satu tindakan menulis transaksi di buku besar dan mengalokasikan uangnya ke baris PR. Saldo rekening langsung berkurang.

baris: APPROVED → transaksi: POSTED · baris: PAID

4. Transaksinya bisa dilihat di Accounting → Ledger.

John Lau

Tanya-jawab

Siapa yang boleh mencatat pembayaran?

Hanya keuangan yang memegang wewenang post_ledger, dan selalu dengan bukti transfer.

Berikutnya: **Melengkapi transaksi di buku besar**

7

Melengkapi transaksi di buku besar

Layar: `/accounting/ledger` · Butuh: `wewenang post_ledger`

Transaksi yang sudah tercatat (POSTED) ditandai lengkap (COMPLETED) kalau nota atau bukti transfernya sudah menempel. Ini tanda bahwa transaksi itu sudah bisa dipertanggungjawabkan.

1. Buka Accounting → Ledger, klik transaksinya untuk membuka lacinya.

transaksi: POSTED → —

2. Pastikan nota atau bukti transfer sudah menempel, lalu tekan **Mark completed**.

Kenapa: Tanpa nota atau bukti transfer ditolak (`document_required`).

transaksi: POSTED → transaksi: COMPLETED

Tanya-jawab

Apa bedanya POSTED dan COMPLETED?

POSTED berarti uangnya sudah tercatat di buku besar. COMPLETED berarti dokumennya (nota atau bukti transfer) sudah lengkap menempel.

Berikutnya: **Mencocokkan rekening koran dengan buku besar**

8

Verifikasi bukti yang masuk (kotak verifikasi)

Layar: `/accounting/verifikasi` · Butuh: `wewenang resolve_inbox`

Foto nota dan bukti yang dikirim dari lapangan lewat Chat masuk ke kotak verifikasi sebagai PENDING. Keuangan memutuskan: jadikan transaksi, tempelkan ke transaksi yang ada, catat saja, atau tolak dengan alasan. Tidak ada yang dibuang.

1. Buka Accounting → Verifikasi. Bukti yang dikirim dari Chat menunggu di sini sebagai PENDING.

— → PENDING

Pick one

The document on the left, what to do with it on the right.

John Lau

Already decided 30 hari 90 hari

2. Pilih jalannya: **Make a transaction** (jadi transaksi baru), **Link to a row** (tempel ke transaksi yang sudah ada), **Retro request line** (dibeli dulu, disetujui belakangan), **Note** (catat saja), atau **Reject**.

Kenapa: Menolak wajib dengan alasan (reason_required), supaya pengirim tahu kenapa.

PENDING → CONFIRMED / ATTACHED / NOTED / REJECTED

Rekening koran dari bank diunggah per periode, lalu tiap baris bank dicocokkan dengan transaksi di buku besar. Ini bukti bahwa yang tercatat benar-benar keluar atau masuk bank.

1. Buka Accounting → Rekening koran, unggah file rekening koran untuk satu rekening dan satu periode, lalu tekan **Masukkan N baris**.

Kenapa: Periode yang sama tidak bisa diunggah dua kali (`period_already_uploaded`).

– → baris bank: unmatched

Rekening koran

Untuk BCA 064 dan BCA USD 081 ini bukan pencocokan — ini satu-satunya jalan mutasi mereka masuk ledger. Baris dolar tidak bisa dibukukan sebelum kursnya diisi.

BCA 064 · 2026-08-25 → 2026-09-07 (6 belum diputuskan)

BCA-064_25Agu-07Sep.csv — diunggah Anggun Lestari, 2026-09-08 · Diserahkan pimpinan lewat WhatsApp, dua mingguan.

SALDO AWAL Rp 486,400,000 menurut BCA 064	MUTASI +Rp 22,455,500 6 baris	SALDO AKHIR (BANK) Rp 508,855,500 tertulis di rekening koran	SALDO AKHIR (HITUNG) Rp 508,855,500 cocok
--	--	---	--

BCA USD 081 · 2026-08-01 → 2026-08-31 (3 belum diputuskan, 3 menunggu kurs)

BCA-USD-081_Agustus.csv — diunggah Anggun Lestari, 2026-09-08 · Rekening dolar — kurs hari transaksi belum diisi.

SALDO AWAL USD 18,400 menurut BCA USD 081	MUTASI -USD 6,250 3 baris	SALDO AKHIR (BANK) USD 12,150 tertulis di rekening koran	SALDO AKHIR (HITUNG) USD 12,150 cocok
--	--	---	--

3 baris dalam USD belum punya kurs. Sistem tidak menebak kurs: yang benar adalah kurs yang bank berikan hari itu, dan itu ada di nota transaksinya.

John Lau

2. Untuk tiap baris bank, pilih saran di bawah **Mirip dengan:** untuk mencocokkannya dengan transaksi buku besar.

Kenapa: Nominal atau arah yang berbeda ditolak (`amount_differs`, `direction_differs`).

baris bank: unmatched → baris bank: matched

3. Baris bank yang belum ada di buku besar (misalnya biaya admin) dibukukan langsung dengan **Bukukan**, atau dilewati dengan alasan.

Kenapa: Membukukan dari rekening koran tetap menulis transaksi, jadi perlu wewenang `post_ledger`.

baris bank: unmatched → baris bank: booked / ignored

Tanya-jawab

Kenapa pencocokan ditolak amount_differs?

Nominal di baris bank tidak sama dengan nominal transaksi di buku besar. Periksa lagi transaksinya; jangan dicocokkan ke transaksi yang berbeda nominalnya.

Temuan simulasi — yang belum berjalan sesuai SOP

Simulasi menemukan langkah-langkah berikut yang belum berjalan seperti yang ditulis di atas. Sudah dilaporkan ke IT; sampai diperbaiki, ikuti catatan di bawah.

1. **Kenapa halaman New request tidak bisa dibuka?**

Saat ini halaman /procurement/pr/new masih ikut memuat daftar work order dari modul produksi, yang belum aktif di sistem live, jadi halamannya belum dibuka. Sudah dilaporkan ke IT; sementara itu PR dibuat oleh admin.

2. **Apakah PO otomatis tersambung ke baris PR?**

Belum. Saat ini PO dibuat terpisah dari baris PR: sistem belum mencatat baris PR mana yang dibeli oleh PO tersebut. Pastikan sendiri baris PR-nya sudah APPROVED sebelum membuat PO.

3. **Kenapa penerimaan ditolak photo_required padahal foto sudah diunggah?**

Ini kesalahan sistem yang sudah ditemukan saat simulasi: layar penerimaan mengirim jenis dokumen dengan nama tampilan, sedangkan database mengharapkan kodenya. Sudah dilaporkan ke IT untuk diperbaiki.

4. **Bagaimana membayar DP PO?**

Belum ada tombol untuk membayar termin PO langsung. Pembayaran dicatat ke baris PR yang disetujui lewat "Post Rp... to the ledger". Termin di halaman PO akan tetap terbaca belum dibayar sampai fiturnya tersedia.
